

ALEXANDER WHITE

alexander.white@du.edu | (651) 263-2545 | St. Paul, MN | <https://www.linkedin.com/in/alexanderwhite13/>

SKILLS & COMPETENCIES:

SQLite, MSSQL, Python, R, Excel, VBA, Tableau, Power BI, Visio

Data warehousing, ETL/data pipelines, data modeling, database design and management, predictive modeling, statistical analysis (regression, hypothesis testing), constrained/linear optimization, KPI development, data visualization, requirements gathering, process automation, yield and margin analysis, cross-functional stakeholder communication.

PROFESSIONAL EXPERIENCE

Operations Lead – Aspen Dental, MN | Aug 2026–Present

- Analyze insurance coverage, benefits, and patient financing against doctor-recommended treatment plans, building options that balance clinical need with what the patient can afford, as reflected in treatment acceptance.
- Translate clinical terminology and insurance breakdowns into plain language during patient consults, turning complex treatment and cost data into decisions patients can make with confidence, as measured by case acceptance.
- Serve as liaison across the Operations Lead, Patient Experience Coordinator, and Office Manager roles, mapping how each position's workflow feeds the others to close handoff gaps in scheduling, billing, and patient flow.

Customer Service Advisor – Waterway, CO | Aug 2025–Jun 2026

- Lifted sales conversion 13% by applying customer and vehicle data to segment 700+ daily interactions, testing recommendations against observed attributes.
- Raised month-to-month member acquisition 10% through building and testing predictive models on customer need from transaction history and on-site business unique attributes.
- Ran continuous hypothesis testing over 500 samples daily, refining targeting criteria and messaging against measured conversion outcomes.

Program Manager – Gaylord Rockies, CO | Nov 2021–Mar 2023

- Achieved a 3.7x return on \$2.9M in inventory, generating \$10.7M in revenue, by developing a production program built on constrained optimization and demand forecasting.
- Allocated constrained protein supply across 17 operations during peak seasons of 10,000+ guests, translating complex data into operational guidance for leaders planning against variable, guest-driven demand.
- Identified a cost-recovery opportunity by analyzing waste inputs, converting them into a new product line worth ~\$468K in annualized savings.

Emergency Medical Technician / IV Tech – Action Care Ambulance | 2017–2021

- Reduced transport time to definitive care by analyzing real-time infrastructural data, identifying optimal routes under varied road conditions.
- Facilitated life-saving intervention by rapidly analyzing raw patient data under time pressure to identify and execute the correct course of action.
- Advocated for patient care standards across agency and hospital handoffs, ensuring protocol compliance and continuity of care despite jurisdictional and procedural variation

RQ-7B UAV Technician & Small Arms Instructor – U.S. Marine Corps | 2012–2017

- Delivered operational recommendations to flight commanders using aircraft data and system analysis against tolerance thresholds, serving as sole technical authority across the aircraft's lifecycle.
- Diagnosed and resolved in-mission system failures in real time by translating technical documentation into actionable guidance for operators, while training and supervising a launch and recovery crew.
- Diagnosed performance deficiencies across 9,600 Marines over an 8-month period by analyzing dispersion patterns in outcome data, translating diagnostic signals into individualized interventions improving force readiness across 1,200 instructional hours.

ANALYTICS PROJECTS

Player Value Prediction— LA Kings Organization

- Delivered roster-valuation using R/RStudio and trade-target recommendations to the LA Kings front office by solving the problem of quantifying NHL trade value objectively. Built a multiple linear regression model on historical trade, salary, and performance data — identifying Age and AAV as significant predictors ($p < 0.05$) to produce a repeatable, data-driven valuation framework.

Database Design & Visualization

- Surfaced a \$44K tier-upgrade growth opportunity and a 66/34 digital-to-assisted signup advantage by centralizing fragmented transaction data into a structured analytical model — building a star-schema data mart with SCD2-tracked dimensions and an end-to-end ETL pipeline to deliver a stakeholder-ready KPI layer

MLB Lineup Optimizer – DraftKings

- Proved that contextual player adjustments outperform naive historical averages under real constraints. Formulated a Binary Integer Program in Python with salary cap and roster rules, benchmarked across three strategies — optimal, predictive, and naive — to validate model performance.

Global Oil Production Analysis

- Surfaced 120+ years of country-level oil production trends from a dataset with no visual structure by transforming raw TWh data into a clear, decision-ready chart. Cleaned and reshaped a multi-country energy dataset in Python, applying colorblind-accessible design and formatted axes to deliver a stakeholder-ready visualization.

EDUCATION

BSBA in Business Analytics, University of Denver, Daniels College of Business | Graduated June 2026

Awards: Cum Laude and Beta Gamma Sigma

Additional Accreditations: Associate of Occupational Studies (Culinary Arts); National EMT Certification
